Product Bulletin	May 2012
Symphoni Conventional Range	

Dear Customer,

A new European standard has been introduced called EN54-23 which specifies the conformity and performance criteria of all Visual Alarm Devices, commonly referred to as VAD's. From March 2013, it will become mandatory that all VAD's meet a standardised light output requirement.

With this impending standard in mind, Fulleon has conducted a review of the Symphoni conventional range to ensure we best meet the future needs of our customers and offer market leading solutions. The current range consists of a **Symphoni™ Sounder (SY)** and a **Symphoni AV™ Sounder Beacon (SYAV)**. While this range is a core platform for specialist applications, EN54-23 will demand a much higher light output than what the SYAV can currently provide and it will no longer be suitable for use from March 2013.

Following this review, the decision has been made to withdraw both Symphoni conventional products from sale, with effect from **1st December 2012** and replace them with superior alternatives that better meet your needs and comply with EN54-23.

Please note the SYMPHONI HO™ and SYMPHONI VOICE+™ will not be affected in anyway and will continue to be available for sale.

Solution

We highly recommend the Symphoni Sounder (AV) is replaced with the **Roshni LP™** as it offers a variety of superior features. It generates a higher sound output, a greater choice of tones, a higher IP rating and a more robust construction. Stock holding will be reduced as it is suitable for both indoor and outdoor applications so separate versions will not be necessary.

To replace the Symphoni AV Sounder Beacon (SYAV), time and expertise has been invested in extending the Roshni LP™ range to include a Visual Alarm Device that meets the requirements of and fully complies with EN54-23. Further details on this product will be sent later in the year.
