

**March 2013**

## **Important Notice**

Where the Construction Products Directive or Regulation (CPD/CPR) is a country requirement, the beacon function on this product cannot be used, legally, for the purpose of visually alerting the occupants of a building to a fire alarm condition. For the UK, Eire and Sweden this regulation becomes mandatory from 1<sup>st</sup> July 2013.

### ***For an alternative solution, the compliant LX beacon range has been developed***

The LX beacon range provides a compliant solution for those who wish to install beacons for fire use within the EU. The products will be rolled out from May 2013 and will be fully compliant with the new EN 54-23 standard and will thus be CE marked accordingly under the CPD.

For further details on the new range, please download the product catalogue [here](#) or if you require more information on EN 54-23, then download our [handy pocket guide to EN 54-23](#). The information provided will guide you through the new requirements and assist you with your LX range product selection.

Note: We will continue to produce most of our current range of beacons for '**non-fire use**' within the EU and for unspecified uses (fire or non-fire) outside of the EU, where local legislative requirements allow.
